*(Provisional Protection refused.)*

PROVISIONAL SPECIFICATION left by Joseph Severin Guirette at the Office of the Commissioners of Patents, with his Petition, on the 6th November 1863.

I, JOSEPH SEVERIN GUIRETTE, of Paris, in the Empire of France, Doctor of  
5 Medicine, do hereby declare the nature of the said Invention for “AN IMPROVED INHALING APPARATUS,” to be as follows :—

This apparatus consists of a vessel fitted as hereafter explained, through which air is to be drawn before being inhaled. This vessel is provided with an inlet tube for the admission of air, and the mouth of this tube is covered  
10 by one, two, or more loose cones or thimbles, which fit over one another, and in the crown of each of which is an aperture. The aperture in the lowest cone is the largest, and in that next above it is smaller, and so on, the aperture being smallest in the top cone. By these apertures the admission of air is graduated according to the requirement of the particular case being treated. There is  
15 also an outlet pipe from the vessel which opens into a tube terminating in a mouth-piece, and of sufficient length to cause the condensation of any condensible vapours before reaching the mouth of the patient. I prefer the employment of loose perforated cones for regulating the admission of the air, but other means of regulating may be adopted.
